Users.cs

```csharp
namespace FirstBank.Models
{
    public class Users
    {
        public int Id { get; set; }
        public string UserName { get; set; }

        public string Email { get; set; }
        public string Password { get; set; }
    }
}
```

UsersController

```csharp
using FirstBank.Models;
using Microsoft.AspNetCore.Mvc;

namespace FirstBank.Controllers
{
    public class UsersController : Controller
    {
        private readonly Users user=new Users()
        {
            Id = 1,
            UserName = "Sam",
            Email = "sam@gmail.com",
            Password = "sam@123"
        };
        [HttpGet]
        public IActionResult Login()
        {
            return View();
        }
        [HttpPost]
        public IActionResult Login(Users model)
        {
            if (ModelState.IsValid && model.UserName == user.UserName && model.Email ==
user.Email && model.Password == user.Password)
            {
                return RedirectToAction("Index", "Dashboard");
            }
            ModelState.AddModelError("", "Invalid username or Password");
            return View(model);
        }
    }
}
```

Login.cshtml

```html
@model FirstBank.Models.Users

@{
    ViewData["Title"] = "Login";
}

<h1>Login</h1>

<h4>Users</h4>
<hr />
<div class="row">
    <div class="col-md-4">
        <form asp-action="Login">
            <div asp-validation-summary="ModelOnly" class="text-danger"></div>

            <div class="form-group">
